

9. CLINICAL PROGRAMS :

In clinical practice, knowing and implementing an evidence-based practice is critical to enhance quality and hence patient safety.

Through the professional AUBMC clinical expertise, EMA helps healthcare organizations tailor their own evidence-based clinical programs.

EMA facilitates the exchange of know-how in comprehensive areas including medical, surgical, pediatrics, obstetrics and gynecological, psychiatric, nursing and paramedical programs. This will be achieved through providing educational support and practical assistance to the medical team at the healthcare institution. The aim is to ensure good quality care, patient safety, and improve performance.

EMA also assists in facilitating the process of getting medical-second-opinions, of sending visiting doctors on continuous basis, and in expediting smooth patients' referrals as required. These tasks will be performed whenever they fall within the context of the vision and mission of AUB Faculty of Medicine and Medical Center.

EMA also promotes collaborations in pioneering clinical research activities which will lead to the advancement in clinical practice and improvement in patient care outcomes.
